Art Unit: 1796

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Agostini et al '332 in view of Alexandre et al '543.

Agostini et al disclose in situ formation of nanofillers such as silica or alumina in an elastomers matrix. These methods are taught as promoting intimate dispersion of the filler. The reference fails to teach the concurrent in situ polymerization of the polymer matrix or the use of a plastic matrix.

Alexandre et al however, teach the formation of thermoplastic nanocomposites based on polyolefins or polystyrene by polymerization of the monomers in the presence of the nanofiller.

It would have been obvious to one of ordinary skill in the art to combine the in situ filler formation of the primary reference with the in situ polymer formation of the secondary reference when a nanofiller intimately dispersed in a thermoplastic was desired.
